Skills

Front End: Javascript ES6, React.js, React Hooks, jQuery, HTML5, CSS3
Back End: Node.js, PostgreSQL, Express.js,
Additional Tools: Mocha, Chai, Git, Github, Webpack, Heroku, Vercel, Enzyme, Jest
Additional Skills: RESTful APIs, unit testing, Integration testing

---

Recent Projects

Saneful | Github: Unique full stack survival game with game saving capabilities as well as a leaderboard
Live Link: Saneful
- Built with React.js, Node.js, Express.js, and PostgreSQL
- Used functional based programming in React.js
- Implemented migration of databases for saved game information as well as relational data/table manipulation
- Implemented a live leaderboard feature using PostgreSQL that displays highest score per user for a more competitive and immersive experience

A Guide To Hozen | Github: Full stack application that uses spaced-repetition to help users learn new languages
Live Link: Hozen
- Built with React.js, Node.js, Express.js, and PostgreSQL
- Implemented JWT authentication with login system
- Designed relational database schema and RESTful API for the backend server
- Implemented spaced-repetition logic using linked list data structure for more effective learning

Subroom | Github: Full stack application that consolidates all online subscription information into one place.
Live Link: Subroom
- Built with React, Node, Express, and PostgreSQL
- Implemented JWT authentication with login system
- Designed relational database schema and RESTful API for the backend server
- Implemented a feature that displays total monthly subscription cost for better user financial tracking
